## Introduction

As the world entered the era of big data, the need for its storage also grew. It was the main challenge and concern for the enterprise industries until 2010. The main challenge and concern for the enterprise industries until 2010. The main focus was on building framework and solutions to store data. Now when Hadoop and other frameworks have successfully solved the problem of Storage, the focus and other frameworks have successfully solved the problem of storage, the focus has shifted to the processing of this data. Data Science is the secret source here. All the ideas which you see in Hollywood Sci-fi movies can actually turn into reality by Data Science. Data Science is the future of Artificial Intelligence. Therefore, it is very important to understand what is Data Science and how can it add value to your business.

Data science is all about finding and exploring data in the real world and using that knowledge to solve business problems. Some examples of data science are:

Customer Prediction – System can be trained based on customer behaviour pattern stop predict the likelihood of a customer buying a product.

Service Planning – Restaurants can predict how many customers will visit on the weekend and plan their food inventory to handle the demand.

## Objectives of the course:

1. Understand the need for Data Science.
2. To know the concept of Data Science?
3. To know different Data Sources and Programming Platforms
4. Understanding statistics for data science
5. Knowing different Data visualization tools

## Learning Outcomes:

1. Students will develop relevant programming abilities.
2. Students will demonstrate proficiency with statistical analysis of data.
3. Students will develop the ability to build and assess data based models.
4. Students will execute statistical analyses with professional statistical software.
5. Students will demonstrate skill in data management.
6. Students will apply data science concepts and methods to solve problems in real-world contexts and will communicate these solutions effectively.

**Short Term Courses 2021-22**

**Short Term Course in,  
Photojournalism [level-1]**

### **SYLLABUS**

#### **Course Description :**

This is an introductory course in photojournalism presented in a multimedia context. Students will use the journalism College's Canon DSLR (those who have equivalent cameras of their own are encouraged to use them). The course will be taught as a hands-on workshop. Instruction will progress from basic camera operation and the news "one shot" to more comprehensive visual storytelling that may incorporate audio, video or other multimedia components.

Despite technologies that in recent years have transformed how news photography is produced and distributed, the strength of the still image remains undiminished. In fact, the market for stories communicated visually has never been stronger. Photographs, presented alone or as an essay in a multimedia context, continue to provide the photojournalists who make them a uniquely powerful window onto the world in which we live.

This course will help the students become well rounded in the fundamentals of digital Photojournalism. Four areas of instruction will be emphasized: How cameras work in field of Journalism, how composition works, how lighting works, how to use photo editing software. Students will, generally, receive basic instruction, demonstration, and see samples of the desired outcomes, at the beginning of each period. They will be allowed to go outside and shoot assignments, based on what they are learning. Perhaps the most useful part of classroom instruction will be daily reviews of photos students have shot the previous day(s). They will see what makes a successful photo and what does not.

At the end of this course, they will:

Know how to use various features of the camera to have creative control of your photographs for the field of Journalism.

- Be able to decide what type of lighting to use in a given situation to produce optimum results.
- See how photographic composition can make or break a photograph
- Understand how to use photo editing software to improve the overall appearance of images

**Introduction**

As the world entered the era of python, the need for its storage also grew. It was the main challenge and concern for the enterprise industries until 2010. The main challenge and concern for the enterprise industries until 2010. The main focus was on building framework and solutions to store data. Now when Hadoop and other frameworks have successfully solved the problem of storage, the focus and other frameworks have successfully solved the problem of storage, the focus has shifted to the processing of this data. Data Science is the secret source here. All the ideas which you see in Hollywood sci-fi movies can actually turn into reality by Data Science. Data Science is the future of Artificial Intelligence. Therefore, it is very important to understand what is Data Science and how can it add value to your business.

Data science is all about finding and exploring data in the real world and using that knowledge to solve business problems. Some examples of data science are:

**Customer Prediction** – System can be trained based on customer behaviour pattern stop predict the likelihood of a customer buying a product.

**Service Planning** – Restaurants can predict how many customers will visit on the weekend and plan their food inventory to handle the demand.

## Introduction

When it comes to data science, we need some sort of programming language or tool, like Python. Although there are other tools for data science, like R and SAS, we will focus on Python and how it is beneficial for data science in this article.

Python as a programming language has become very popular in recent times.

It has been used in data science, IoT, AI, and other technologies, which has added to its popularity.

Python is used as a programming language for data science because it contains costly tools from a mathematical or statistical perspective. It is one of the significant reasons why data scientists around the world use Python. If you track the trends over the past few years, you will notice that Python has become the programming language of choice, particularly for data science. There are several other reasons why Python is one of the most used programming languages for data science, including:

**Speed** - Python is relatively faster than other programming languages

**Availability** - There are a significant number of packages available that other users have developed, which can be reused

**Design goal** - The syntax roles in Python are intuitive and easy to understand, thereby helping in building applications with a readable codebase

## Objectives of the course:

1. Introduction to Python Programming Language
2. Learning OOP in Python
3. Learning NumPy and sciPy
4. Learning Data Manipulation
5. Learning Data Visualization with Matplotlib

## Learning Outcomes

1. Basics of Python for Data Analysis.
2. Python libraries and Data Structures.
3. Exploratory analysis in Python using Pandas.
4. Data Munging in Python : Using Pandas.
5. Building a Predictive Model in Python.
