Short Term Course

PHOTOGRAPHY & VIDEO SHOOTING [level-1]

SYLLABUS

• **Course Description :**

This course will help the students become well rounded in the fundamentals of digital photography. Four areas of instruction will be emphasized: How cameras work, how composition works, how lighting works, how to use photo editing software. Students will, generally, receive basic instruction, demonstration, and see samples of the desired outcomes, at the beginning of each period. They will be allowed to go outside and shoot assignments, based on what they are learning. Perhaps the most useful part of classroom instruction will be daily reviews of photos students have shot the previous day(s). They will see what makes a successful photo and what does not.

At the end of this course, you will:

- Know how to use various features of the camera to have creative control of your photographs.
- Be able to decide what type of lighting to use in a given situation to produce optimum results.
- See how photographic composition can make or break a photograph
- Understand how to use photo editing software to improve the overall appearance of images

NEEDS AND RESOURCES

Learning Outcomes

To successfully complete this course, students must:

- Show up in class, on time!
- Pass course quizzes
- Complete assignments by given deadlines
- Cooperate with other students and staff to increase learning potential
- Take and Edit photos successfully using digital cameras and photo editing software
- Research a photographer and report on his (or her) style and impact on photography

Take part in class discussions and critiques of photos presented in class.

Required Materials

To successfully complete this course, you will need:

Access to a digital camera is essential! (Both Compact Digital Cameras or SLR Digital cameras are acceptable) *The class has 5 compact digital cameras students may use during class time. But with the size of each photography class between 35 and 40 students, that is a very small number!

Additional Resources

It would be wise if students have a portable USB storage device so they will be able to download images from the computers to take home!

The students are restricted to one gigabyte of memory on the school server. This will be quickly used up when shooting and downloading photos at school.

Course Topics

The course will cover the following topics:

1. Various Camera Modes and their uses
2. Flash Modes
3. ISO settings
4. White Balance
5. Lens Focal Length
6. Focusing Options
7. Portraiture
8. Landscape
9. Indoor Photography
10. Black and White (Monochrome)
11. Basic Techniques of Lighting (Including: Front, Side, Back, Defused, etc.)
12. Basic Photo Composition (Including: Rule of 3rds, Leading Lines, Framing Subjects, etc.)
13. Basic Photo Editing (Using Photoshop and Picasa)
14. Knowledge of Pixels, Mega Pixels, DPI, PPI
15. Practical

COURSE SCHEDULE

I will attempt to make a calendar for due dates of assignments, quizzes, etc. as soon as I am up and running on the school software!

POLICIES AND PROCEDURES

General Rules:

- Students are to handle all class equipment, (including computers, cameras, lights, etc.) with care.
- Cell phones, head phones, I-pods, etc. will not be allowed in class. (Either in the classroom or outside, when shooting)
- Students are to avoid shooting photos in or near other classrooms so they will not disrupt the teaching and learning of others.
- Students are not permitted to leave the school campus during class time to shoot photos.
- Food and beverages are not permitted in the classroom at any time.
- Class lab time is expected to be spent working on assignments. Students will not be allowed to defer shooting photos, or editing photos until a later time.
- Photos taken at home may only be counted for extra credit, and then only if a student has completed all of the other assignments for the class

Introduction

As the world entered the era of big data, the need for its storage also grew .It was the main challenge and concern for the enterprise industries until 2010. The main focus was on building framework and solutions to store data. Now when Hadoop and other frameworks have successfully solved the problem of storage, the focus has shifted to the processing of this data. Data Science is the secret sauce here. All the ideas which you see in Hollywood sci-fi movies can actually turn into reality by Data Science. Data Science is the future of Artificial Intelligence. Therefore, it is very important to understand what is Data Science and how can it add value to your business.

Data science is all about finding and exploring data in the real world and using that knowledge to solve business problems. Some examples of data science are:

Customer Prediction – System can be trained based on customer behavior pattern stop predict the likelihood of a customer buying a product

Service Planning – Restaurants can predict how many customers will visit on the weekend and plan their food inventory to handle the demand
