Report of ICT

Class: FYBA

Paper: -Physical Geography

Topic:- Elements of Geography

Day & Date: 12/09/2018 at 9.00 am.

Beneficiaries: 20

A Brief Report:

Information and Communications Technology (ICT) can impact student learning when teachers are digitally literate and understand how to integrate it into curriculum. ICTs stand for information and communication technologies and are defined, for the purposes of this primer, as a “diverse set of technological tools and resources used to communicate, and to create, disseminate, store, and manage information.” These technologies include computers, the Internet, broadcasting technologies (radio and television), and telephony. Moreover, different technologies are typically used in combination rather than as the sole delivery mechanism. This include use of print, recorded audio and video, broadcast radio and television, and audio conferencing technologies.

Worldwide research has shown that ICT can lead to improved student learning and better teaching methods. A report proved that an increase in student exposure to educational ICT through curriculum integration has a significant and positive impact on student achievement, especially in terms of "**Knowledge-Comprehension**", "**Practical skill**" and "**Presentation skill**" in subject areas such as mathematics, science, and social study.
