ITC Enabled Teaching-Learning

Introduction:

"ICT" is the Information and Communication Technologies. "ICT in Education" means "Teaching and Learning with ICT".

ICTs stand for information and communication technologies and are defined, for the purposes of this primer, as a "diverse set of technological tools and resources used to communicate, and to create, disseminate, store, and manage information." These technologies include computers, the Internet, broadcasting technologies (radio and television), and telephony. Moreover, different technologies are typically used in combination rather than as the sole delivery mechanism. This include use of print, recorded audio and video, broadcast radio and television, and audioconferencing technologies.

Worldwide research has shown that ICT can lead to improved student learning and better teaching methods. A report proved that an increase in student exposure to educational ICT through curriculum integration has a significant and positive impact on student achievement, especially in terms of "Knowledge-Comprehension", "Practical skill" and "Presentation skill" in subject areas such as mathematics, science, and social study.

Educational ICT tools can be divided into three categories: Input source, Output source and Others.

MAIN ADVANTAGES OF ICT TOOLS FOR EDUCATION

- Images can easily be used in teaching and improving the retentive memory of students.
- Teachers can easily explain complex instructions and ensure students' comprehension.
- Teachers are able to create interactive classes and make the lessons more enjoyable, which could improve student attendance and concentration.

The ICT can be used in the following areas:

- Teaching
- Diagnostic Testing

- Remedial Teaching
- Evaluation
- Psychological Testing
- Development of Virtual Laboratory
- Online Tutoring
- Development of Reasoning & Thinking
- Instructional Material Development

Following are some of the ICT based Teaching-Learning activities

ICT Enabled Teaching-Learning

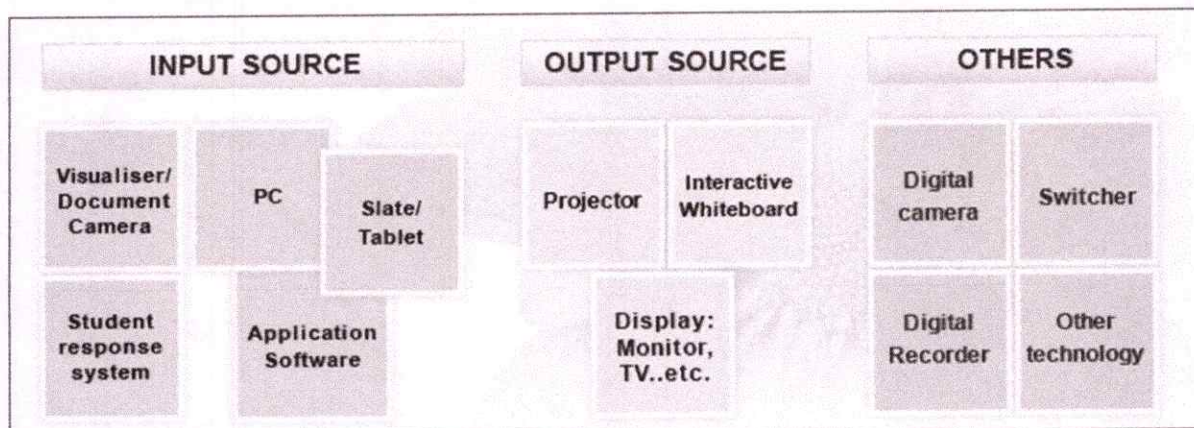

Introduction:

"ICT" is the Information and Communication Technologies. "ICT in Education" means "Teaching and Learning with ICT".

ICTs stand for information and communication technologies and are defined, for the purposes of this primer, as a "diverse set of technological tools and resources used to communicate, and to create, disseminate, store, and manage information." These technologies include computers, the Internet, broadcasting technologies (radio and television), and telephony. Moreover, different technologies are typically used in combination rather than as the sole delivery mechanism. This include use of print, recorded audio and video, broadcast radio and television, and audioconferencing technologies.

Worldwide research has shown that ICT can lead to improved student learning and better teaching methods. A report proved that an increase in student exposure to educational ICT through curriculum integration has a significant and positive impact on student achievement, especially in terms of "**Knowledge-Comprehension**", "**Practical skill**" and "**Presentation skill**" in subject areas such as mathematics, science, and social study.

Educational ICT tools can be divided into three categories:
Input source, Output source and Others.

MAIN ADVANTAGES OF ICT TOOLS FOR EDUCATION

- Images can easily be used in teaching and improving the retentive memory of students.
- Teachers can easily explain complex instructions and ensure students' comprehension.
- Teachers are able to create interactive classes and make the lessons more enjoyable, which could improve student attendance and concentration.

The ICT can be used in the following areas:

- Teaching
- Diagnostic Testing
- Remedial Teaching
