Introduction: Social science research in India has had a chequered history. In India the development of social science research is directly an outcome of the processes of modern education, the setting-up of universities and the academic interests of Indian intellectuals in writing issues concerning the people of the country during the colonial period. In the pre-independence phase social science research was mostly university centric and after the independence of India many institutes of research came up which have also contributed towards the development of social science research. Today social science research in India has grown manifold and as of 2014, there are 677 universities in India with more than 500 departments of social sciences as per the latest statistics from the website of India's HRD ministry. Some NGOs and policy research initiatives have also produced specific development focused research products but generally do not have longer term interest in research and the quality of their research is not yet established. Finding out the major challenges of social science research in India is the theme of this article.

Concept of Social Science & Social Science Research: Before defining Social Science Research we should know about the concept of Social Science. Social Sciences may be defined as the discipline, which deal with humans in their social and behavioral references. Edwin, R. A. Selegnian (in the 1st chapter of Encyclopedia of Social Sciences) has defined Social Sciences as "those mental and cultural sciences, which deal with the activities of the individual as a member of a group". Social Sciences as we can observe now are of recent origin. The idea of Social Sciences developed from Philosophy and did many other branches of knowledge. What is now stated as Social Sciences was formerly known as „Social Discipline“, but with the advancement of time, due to the distinctive achievements of the scientific method on our way of life, the term „Social Discipline“ was taken over by the term „Social Sciences“². Generally speaking, the Social Sciences like Sociology; Economics, Anthropology, History, Psychology, Political Science etc cannot be kept within the limitations of demarcated boundaries. This is because; every human activity is a multifaceted activity. Therefore the Social Sciences overlap other disciplines and also relates to Natural and Human Sciences along with the Arts. In totality, Social Sciences study the structure and properties of human groups, the way of individuals interact with one another and within other environmental groups. When we talk about Social Science Research, it means, research conducted by social scientists following a systematic plan. Social Science Research refers to any scientific study of human action and interaction focusing on elements of thought and behavior that are in some sense social³. Social scientists employ a range of methods in order to analyze a vast breadth of social phenomena. Social Science Research concerned with a systematic
